

EUFRUIT

The European Fruit Network

March 2016 – February 2019

Horizon 2020 Thematic Network

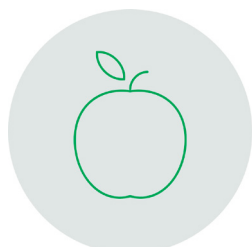

Through a multi-actor approach, EUFRUIT aims to improve the implementation of research outcomes into practical and applicable knowledge that will directly benefit the European fruit sector.

The EUFRUIT consortium consists of 21 partners, including research institutes, universities and industrial partners who represent key parts of the fruit supply chain, from 12 European countries.

Gathering and analysing existing knowledge

EUFRUIT does not seek to create fundamental new knowledge or technologies but rather to gather and analyse state-of-the-art knowledge, to synthesise the national and regional best practices within the four thematic areas and to share this knowledge through the EUFRUIT network.

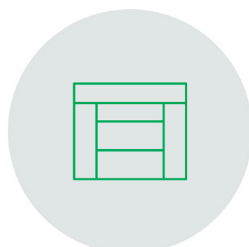

Thematic areas:

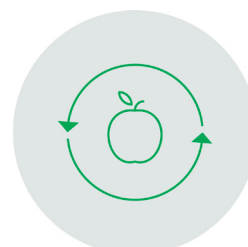

Performance of new fruit varieties

Reduction in pesticide residues

Fruit quality – Improvement of fruit handling/storage

Secure sustainable fruit production

Synthesis reports to identify best practice:

- Performance of new fruit varieties: Year 1 report 2016, Year 2 report 2017
- Reduction in pesticide residues: Year 1 report 2016, Year 2 report 2017
- Fruit quality – improvement of fruit handling/storage: Year 1 report 2016, Year 2 report 2017
- Secure sustainable fruit production: Year 1 report 2016, Year 2 report 2017

EUFRUIT material available online

All the knowledge arising from EUFRUIT is accessible in English on an open access Knowledge Platform. This ensure that existing knowledge is brought from the national /regional levels to become available at a European level (and vice versa) for all stakeholders in the fruit chain to access and implement.
